Sharp Innovators

Orchard prunign machine able to **select areas of vegetation to remove Orchard pruning**, unlike what happens with normal pruners, which perform an undifferentiated removal of vegetation in the external area of the branches.
This machine **allows to create targeted thinning areas** in order to favor the penetration of air and sunlight in all areas where branches develop.

ADVANTAGES

Mechanical pruning combines the advantages of manual pruning with those of intensive cultivation needs,drastically reducing labor costs.

Good pruning allows light penetration and air circulation among the trees, reducing the need for pesticides and tratments; it facilitates the application of herbicides and fertilizers, helps the movement of machinery in the orchard and has a positive effects on the future productivity of the plant.
